OPTIM

OPTIM

Merino wool tops are stretched, but not set, during Optim™ processing, constructing the fabric at a very high level of thread density in warp and weft.

It is only when the fabric is wet-finished that the stretch is released, causing the yarns to contract, thus leading to an extreme tightening of the fabric structure, and the creation of the immensely dense fabric.

Advancements using OPTIM processing and stretch technology have led to double face fabrics, luxurious drape fabrics, and soft hand feel qualities, all using 100% Merino wool.
